

Protocol: making leaf surface images from molds

1. Prepare

- Find a model folder and take out one working page.
- Open the data file and find the number of the page.

Add the file link here.....

- Open a blank page and record the same number on both two sides and all other information from the working page to the blank page.
- Move all samples on side of the working page and place them in the preparation area (a shallow, gridded slab, or a plastic tray) according to their numbers.
- Check that the sample is clean, could use paper towels to clean the surface.
